Interview Protocol

Initial Set of Questions

- Let us start by talking about your experience in technical documentation. Can you recall a recent piece of documentation that you worked on and describe it briefly? If possible, please share your screen and show us the technical documentation.
- What sort of resources (such as code snippets or screenshots) did you develop? How did you create them?
- What do you consider successful documentation? How do you ensure this?
- Next, can you please tell me what high-quality documentation means to you?

- What steps do you take to ensure the documentation you write meets your desired quality?
- Do you face any challenges in this process?
- How do you navigate these challenges? Do you have any strategies for it?
- Since you develop different types of resources, such as code snippets, screenshots, and explanation text, how do you ensure that each component is accurate and functions as expected?
- What exactly are you looking for when you verify the content?
- Do you face any challenges when you verify the content?
- How do you make sure that the documentation is helpful to its audience?

- Has your workflow changed since you started using LLMs? If it has, in what ways?
- What workflows would you like that can help in verifying and validating the documentation?

Additional Questions as Review Process Emerged as Quality Assurance Mechanism

- How is the documentation reviewed? Can you provide some details on the process?

- What do you use the technical review for?
- Who are the people involved?
- Why is it necessary to do a technical review?
- Do you face any challenges in this process?
- What are the expectations from the reviewer?

- What do you use the editorial review for?
- Who are the people involved?
- Why is it necessary to do a editorial review?
- Do you face any challenges in this process?
- What are the expectations from the reviewer?

- Do you use any tools in during review? If you do, can you please show us how you use them?
- How do you set up these tools? Are there any challenges?
- What are the advantages and limitations of using these tools?

- Do you review technical documentation that is developed by other writers?
- What are you looking for when you review?
- What is difficult when you review the content?
